EDUCATION

University of Houston

June 2026

Bachelor of Science in Computer Science

Houston, TX

Relevant Coursework: Data Structures & Algorithms, Computer Organization and Architecture, Principles of Operating Systems, Intro to Automata & Computability, Graph Theory with Applications, Linear Algebra, Discrete Mathematics

EXPERIENCE

Bender Homestead, LLC

August 2025 – May 2026

Software Engineer Intern

Houston, TX

- Built a role-aware roofing performance dashboard that unified sales, marketing, payroll, roster, and CRM data into a centralized analytics platform, improving accessibility for employees.
- Developed authenticated dashboards, user/role management, metric configuration, and entitlement-based access controls using **Next.js**, **TypeScript**, **Express**, **RTK Query**, and **Tailwind CSS**.
- Designed modular reporting services and scalable database architecture with **Drizzle ORM** and **Neon/Postgres**, reducing development time for new reports and streamlining testing with reusable demo datasets.

H-E-B

March 2022 – Present

In-store Shopper

Houston, TX

- Select, sort, and unload items to complete eCommerce online orders while coordinating with multiple departments to resolve inventory and customer request issues.
- Communicate order substitutions and updates to customers while providing efficient curbside delivery service.

PROJECTS

Home Lab & Infrastructure

- Built and maintained a personal home server environment for self-hosted applications, media, photo management, and local AI.
- Deployed and managed applications using **Docker** and **Docker Compose**, including **Ollama**, **Open WebUI**, **Immich**, and **Plex**.
- Configured **Proxmox** to virtualize and manage server workloads, allocating CPU, memory, storage, and networking resources across virtual machines and services.

Artificial Intelligence PDF Reader

- Built an AI-powered PDF question-answering application using **Python**, **Streamlit**, and **OpenAI APIs**.
- Implemented PDF upload and document processing functionality, allowing users to query information contained within uploaded documents.
- Integrated the **OpenAI API** to generate responses based on user questions and document content.

Movie Data Visualizer

- Developed a **Python web scraper** using **Selenium** to automate movie data collection from Letterboxd.
- Automated data processing and storage by exporting collected information to **Google Sheets** for analysis and visualization.
- Created interactive visualizations using **Looker Studio** and integrated the resulting data into a personal website.

Website Portfolio

- Created an online portfolio website using **HTML**, **CSS**, and **JavaScript**. Assured functionality across mobile, tablet, and desktop. Hosted using **GitHub pages**.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, C, C++, Java, SQL, Bash, HTML, CSS

Systems & Infrastructure: Windows, Linux, Docker, Docker Compose, Proxmox, Virtual Machines, Server Hardware

Development: React, Next.js, Node.js, Express.js, REST APIs, PostgreSQL

Tools: Git, GitHub, Ollama, Open WebUI, Selenium
